

Thanks for purchasing Abandoned Lighthouse package!

If you have any issue or suggestion, feel free to contact me on [zefaistos@live.com](mailto:zefaistos@live.com)

### **Demo Scene**

In order to display the intended lightning for the demo scene, make sure to set the color space to "Linear". You can find this option starting from the top menu Edit>Project Settings>Player.

Now on the Inspector, go to Other Settings and set the color space to linear.

### **Using The Asset**

To use the 3D model, simply drag the prefab found in the Prefab folder to your scene.

You can change the rotation speed of the light by selecting the model and changing the values on the inspector.
